

Spectar™ Frost Copolyester

Copolyester
Eastman Chemical Company

Message:

Sheet made with Eastman Spectar Frost™ offers a high end matte surface finish enabling design freedom for in-store fixtures and point of purchase displays (POP). The outstanding toughness of Eastman Spectar Frost™ allows retailers and brand owners to insist on thinner POP and in-store fixture designs without compromising performance. This means you can use less plastic compared to a similar design made from acrylic. And because point of purchase displays and in-store fixtures made from Eastman Spectar Frost™ can be downgauged and have lower breakage rates than acrylic, this means reduced plastics consumption.

Eastman Spectar Frost™ may be cut, sawed, routed and drilled easily with very low risk of chipping. The frost finish is not destroyed during thermoforming or hot line bending. It is challenging to take a "concept to reality", however Eastman Spectar Frost™ offers simple solutions for complex designs. This product has been GREENGUARD INDOOR AIR QUALITY CERTIFIED®.

GREENGUARD Certification recognizes Eastman for manufacturing products with low chemical and particle emissions for better indoor environments. General Information	
Features	Durable
	Fatigue Resistant
	Good Toughness
	Pleasing Surface Appearance
Uses	Decorative Displays
	Lighting Diffusers
	Sheet
Appearance	Frost
Forms	Pellets
Processing Method	Thermoforming
