Tenite[™] Propionate 360E0096916 Natural, Trsp

Cellulose Acetate Propionate

Eastman Chemical Company

Message:

Tenite™ cellulosic plastics are noted for their excellent balance of properties - toughness, hardness, strength, surface gloss, clarity, and a warm feel. The mechanical properties of Tenite™ cellulosic plastics differ with plasticizer levels. Lower plasticizer content yields a harder surface, higher heat resistance, greater rigidity, higher tensile strength, and better dimensional stability. Higher plasticizer content increases impact strength. Tenite™ cellulosic plastics are available in natural, clear, selected ambers or smoke transparents and black translucent. Color concentrates are available in let-down ratios from 10:1 to 40:1. Tenite™ Cellulose Acetate Propionate 360-16 has a plasticizer level of 16%. It meets FDA requirements for certain food-contact applications when supplied in specific FDA color numbers.

General Information		
Additive	Plasticizer (16%)	
Features	Food Contact Acceptable	
	Good Strength	
	Good Toughness	
	High Clarity	
	High Gloss	
	High Hardness	
	Plasticized	
	Renewable Resource Content	
	Soft	
Uses	Cosmetic Packaging	
	Decorative Displays	
	Eyeglass Frames
