

Amodel® A-4145 HH

Polyphthalamide
Solvay Specialty Polymers

Message:

Amodel® A-4145 HH is a 45% glass fiber reinforced heat stabilized grade of polyphthalamide (PPA) that has been designed to provide outstanding property retention to thermal oxidative degradation at temperatures of 230°C. Other features are fast cycling and hot water moldability. This product is particularly suitable to air induction applications within downsized automotive engines such as air induction charge air cooling and exhaust gas recirculation.

Black: A-4145 HH BK324

General Information				
Filler / Reinforcement		Glass fiber reinforced material, 45% filler by weight		
Additive		heat stabilizer		
		Lubricant		
		demoulding		
Features		Good dimensional stability		
		Low hygroscopicity		
		Rigid, good		
		High strength		
		Laser welding		
		Fast molding cycle		
		Good creep resistance		
		Good chemical resistance		
		Heat resistance, high		
		Hot water formability		
		Thermal Stability		
		Lubrication		
Uses		Metal substitution		
		Parts under the hood of a car		
		Application in Automobile Field		
RoHS Compliance		Contact manufacturer		
Appearance		Black		
Forms		Particle		
Processing Method		Water temperature mold injection molding

Injection instructions

Injection Rate: 3 to 4 in/secHolding Pressure: 50% of injection pressureStorage:

Amodel® compounds are shipped in moisture-resistant packages at moisture levels according to specifications. Sealed, undamaged bags should be preferably stored in a dry room at a maximum temperature of 50°C (122°F) and should be protected from possible damage. If only a portion of a package is used, the remaining material should be transferred into a sealable container. It is recommended that Amodel® resins be dried prior to molding following the recommendations found in this datasheet and/or in the Amodel® processing guide.

Proper Ventilation:

It is strongly recommended that the processing site be correctly ventilated during molding. The ventilation should be placed directly above the injection nozzle to prevent exposure to fumes and gases that may be generated.

In the event of a barrel purge where a large melt patty may be generated, it is often advisable to draw the purge patty into a bucket of water to reduce fumes.

Hot Runners:

Solvay does not encourage the use of hot runner technology with this product. For further clarification on hot runners, please contact your Solvay Specialty Polymers Technical Marketing representative.
