Thermoplastic Vulcanizate

ExxonMobil Chemical

Message:

It is a soft, black thermoplastic vulcanized elastomer (TPV) in the thermoplastic elastomer (TPE) series. This material is specially formulated for bonding with sulfur or peroxide cured thermosetting EPDM rubber, for corner injection molding, end caps and special fixing applications, and for increasing the coefficient of friction (COF). This brand of Shanduping TP V is a shear rate dependent product that can be processed on conventional thermoplastic injection molding equipment. It is a polyolefin-based product and can be completely recycled.
