Plaskon SMT-B-1LV

Epoxy; Epoxide

Cookson Electronics - Semiconductor Products

Message:

This material is an epoxy molding compound designed specifically for grid arrays (BGA/LGA). Using an improved optimized filler system, it provides a lower viscosity with higher flow characteristics than SMT-B-1. It is formulated with a unique resin system, which minimizes warpage and enables trouble-free molding onto rigid and flexible laminate substrates. Minimal dimensional change after molding, post bake and subsequent solder treatment make this compound an excellent choice for grid arrays.
