Celstran® PP-GF20-0553 Black

Polypropylene Copolymer

Celanese Corporation

Message:

Polypropylene copolymer reinforced with 20weight percent long glass fibers. Low emission. The fibers are chemically coupled to the polypropylene matrix. The pellets are cylindrical and normally as well as the embedded fibers 10 mm long.
Parts molded of CELSTRAN have outstanding mechanical properties such as high strength and stiffness combined with high heat deflection. The notched impact strength is increased at elevated and low temperatures due to the fiber skeleton built in the parts. The long fiber reinforcement reduces creep significantly.
The very isotropic shrinkage in the molded parts minimizes the warpage.
Complex parts can be manufactured with high reproducibility by injection molding.
Application field: Functionial/structural parts for automotive

General Information			
Filler / Reinforcement	Glass fiber reinforced material, 20% filler by weight		
Features	Low volatilization Low warpage Rigidity, high High strength Chemical coupling		
Uses	Application in Automobile Field		
Processing Method	Injection molding
