Teflon® FEP CJ 95

Perfluoroethylene Propylene Copolymer

DuPont Fluoropolymers

Message:

For inventory control purposes product name may be followed by an X.
Products labeled FEP CJ 95 and FEP CJ 95 X are equivalent and all information in this document is applicable to both.
Typical Application
Insulation and jacket for Wire and Cable, in applications demanding a high degree of stress crack resistance. Tubes and piping for general and chemical process industry.
DuPont Teflon ® FEP CJ 95 is a melt-processible copolymer of tetrafluoroethylene and hexafluoropropylene without additives that meets the requirements of ASTM D 2116 type I.
It offers the excellent combination of properties characteristic of Teflon ® fluoropolymer resins: non-ageing characteristics, chemical inertness, exceptional dielectric properties, low flammability, heat resistance, toughness and flexibility, low coefficient of friction, non-stick characteristics, negligible moisture absorption and excellent weather resistance. As an intermediate molecular weight resin Teflon ® FEP CJ 95 offers higher processing speeds than many FEP grades with similar high level of stress crack resistance.
Stress crack resistance is an important element in establishing end-use performance. Extensive testing of wire and cable constructions is required for definitive performance evaluation. Experience shows that the MIT folding endurance or flex life test, performed on a thin film of resin, has established a good correlation with extensive cable testing. The higher the MIT
flex life, the higher the stress-crack resistance of the resin. MIT test results should be viewed as a guide to comparative performance of the various grades of resin. We recommend that for applications involving repeated thermal and flex cycling, specific tests on the final cable always should be undertaken.
See also DuPont's bulletin "Grade selector for Wire and Cable applications".

General Information	
UL YellowCard	E54681-557110
Features	Food Contact Acceptable Good Chemical Resistance Good Flexibility Good Toughness Good Weather Resistance High ESCR (Stress Crack Resist.) High Heat Resistance Low Friction Low Moisture Absorption
Uses	Cable Jacketing Insulation Wire & Cable Applications
Agency Ratings	ASTM D 2116 type 1 EU 10/2011 FDA 21 CFR 177.1550
Forms	Pellets
Processing Method	Blow Molding Compression Molding

Extrusion

Injection Molding

Physical	Nominal Value	Unit	Test Method
Specific Gravity	2.13	g/cm³	ASTM D792, ISO 1183
Melt Mass-Flow Rate (MFR) (372°C/5.0 kg)	5.0	g/10 min	ASTM D2116, ISO 12086
Water Absorption (24 hr)	< 0.010	%	ASTM D570
Hardness	**Nominal Value**	**Unit**	**Test Method**
Durometer Hardness (Shore D)	56		ASTM D2240, ISO 868
Mechanical	**Nominal Value**	**Unit**	**Test Method**
Tensile Strength (Yield, 23°C)	28.0	MPa	ASTM D638, ISO 12086
Tensile Elongation (Break, 23°C)	330	%	ASTM D638, ISO 12086
Impact	**Nominal Value**	**Unit**	**Test Method**
Notched Izod Impact (23°C)	No Break		ASTM D256, ISO 180
Thermal	**Nominal Value**	**Unit**	
Continuous Use Temperature [1]	205	°C	
Melting Temperature [2]	260	°C	
Electrical	**Nominal Value**	**Unit**	**Test Method**
Dielectric Strength			
0.250 mm [3]	> 95	kV/mm	ASTM D149
0.250 mm	> 95	kV/mm	IEC 60243-1
Dielectric Constant			ASTM D150, IEC 60250
1 kHz	2.03		
1.00 GHz	2.03		
Dissipation Factor			ASTM D150, IEC 60250
1 kHz	5.0E-5		
1.00 GHz	8.0E-4		
Flammability	**Nominal Value**	**Unit**	**Test Method**
Flame Rating [4]	V-0		UL 94
Oxygen Index	> 95	%	ASTM D2863, ISO 4589-2
Additional Information	**Nominal Value**	**Unit**	**Test Method**
Critical Shear Rate (372°C)	20.0	sec^-1	Internal Method
Guide DDR Range			
for cable extrusion	20.0 to 120		
for tubing extrusion	3.00 to 8.00		
MIT Folding Endurance - film (200.0 µm)	4.0E+4	Cycles	ASTM D2176
NOTE			

1.	The continuous service temperature is based on accelerated heat-aging tests, and represents the temperature at which tensile strength and ultimate elongation retains 50% of the original values, after 20 000 h thermal aging When considering the use of Teflon ® FEP at elevated temperatures especially in combination with mechanical, electrical or chemical exposure, preliminary testing should be done to verify suitability.
2.	ASTM D4591 / D3418
3.	Method A (Short-Time)
4.	- These results are based on laboratory tests, under controlled conditions, and do not reflect performance under actual fire conditions.- Current rating is a typical theoretical value
